

## **KnowHow Consulting to implement global EDMS roll-out for MTV Networks Europe**

**Roll-out includes Open Text eDOCS DM, pdfDocs by DocsCorp and scanners**

**London – 30<sup>th</sup> April 2010** – KnowHow Consulting (KnowHow) have been selected by MTV Networks Europe (MTVNE) to implement a global roll-out of their Electronic Document Management System (EDMS) to 20 sites in 17 countries and 5 continents.

Core to the EDMS project is eDOCS DM from Open Text (formerly Hummingbird), the market leading Document Management system. eDOCS DM eliminates the mounting inefficiencies caused by the inability to manage documents as well as the “islands of information” prevalent in many global organisations. KnowHow are also providing a new scanning workflow combining scanners with pdfDocs software. This software uses OCR technology based on watchfolders and allows documents to be accessed, manipulated or saved using the eDOCS DM integrated pdfDocs Desktop software.

MTV selected KnowHow due to their extensive experience in eDOCS DM implementations and customisations as well as their experience and flexibility in providing solutions revolving around this platform. The project includes business analysis, implementation, customisations, testing and training, all of which will be performed by KnowHow in conjunction with the MTVNE team.

*Tony Foy, Managing Director of KnowHow Consulting said:*

*“We are very happy to have been selected by MTVNE to implement the global roll-out of their EDMS. MTV has an internationally recognisable brand and KnowHow are proud that our high level of experience and expertise has led us to be associated with a company of this profile. KnowHow are happy to add MTV to our client-base of over 20 eDOCS customers and are looking forward to a successful project.”*
